

PILOT OPERATED PRESSURE REDUCING VALVES PRV47 (Steel) PRV47I (St. Steel)

DESCRIPTION

The ADCA PRV47 pilot operated pressure reducing valves are designed for use on steam, compressed air, nitrogen and other gases compatible with the construction and they can be installed on pressure reducing stations throughout all industries. Connections are flanged or threaded.

MAIN FEATURES

Robust complete steel or stainless steel construction.
Suitable for dead end conditions.
Guided piston and valve stem.
Hardened plug.

OPTIONS: Soft faced valve plug for gases and steam
 Special pressure top for low pressures
 Drain connection in bottom cover
 Stellited plug and seat

USE: Saturated steam, compressed air and other gases (Group 2) compatible with the construction (except oxygen).

AVAILABLE

MODELS: PRV47 - standard model for steam
 PRV47G -compressed air and gases

VALVE SIZES: DN15 to DN50

CONNECTIONS: Flanged EN 1092-1 or ANSI
 Threaded BSP, NPT, SW.

INSTALLATION: Horizontal installation.
An "Y" strainer, steam separator and steam trap should be provided upstream the valve.
See IMI, installation and maintenance instructions.

ORDER

REQUIREMENTS: Type of fluid
 Maximum operating temperature
 Inlet and outlet pressure
 Flow rate (maximum and minimum)

HOW TO SELECT: Never size the valve according to the pipe diameter in which has to be fitted but according to the required actual flow of fluid.

Refer to valve calculation table or consult the factory.

CE MARKING (PED - European Directive 97/23/EC)	
PN 40	Category
DN15 to DN32	SEP - art. 3, paragraph3
DN40 to DN50	1 (CE Marked)

BODY LIMITING CONDITIONS		
FLANGED PN40 / ANSI 300 *	FLANGED ANSI 150 **	RELATED TEMP.
ALLOW. PRES.	ALLOW. PRES.	
40 bar	19,3 bar	50 °C
37 bar	17,7 bar	100 °C
31 bar	12,5 bar	239 °C
28 bar	10,2 bar	300 °C

Minimum working temperature : - 10°C

* Rating according to EN1092-1:2007

** Rating according to EN1759-1:2004

Maximum upstream pressure (steam) : 28 bar
Maximum upstream pressure (air) : 31 bar
Maximum downstream pressure: 17 bar
Minimum downstream pressure : 0,35 bar*
* 0,07 bar with low pressure top (limited at 7 bar inlet).
Pressure and temperature may change if soft seating or piston rings are used.

USEFUL NOTES ON VALVE AND PIPE SIZING
A special low pressure top assembly should be fitted for outlet pressures from 0,07 up to 0,5 bar (Fig.2).
Two regulators in parallel should be used on larger systems where minimum flow is less than 10% of maximum. If the flow is unknown it is possible to estimate it based on pipe sizing or equipment heat requirement - please consult.

The balance pipe connection is recommended to enter the downstream pipe at a minimum of 1 meter from the valve. A spool piece can be supplied to house the balancing pipe.

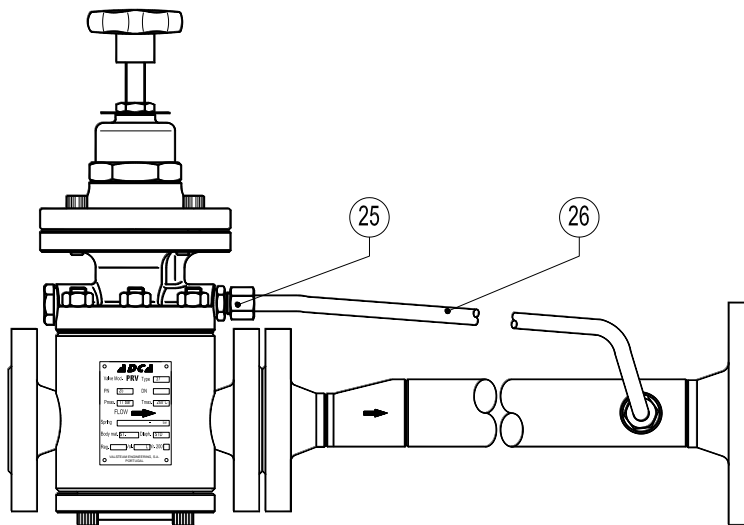

Fig.4

PRV 47 Standard for steam, compressed air or gases (Fig.4)

Description of operation: the high pressure upstream fluid is admitted to the valve and pilot valve. By compressing the regulating spring over the diaphragm, the pilot valve opens admitting regulated pressure on the top of the piston, which opens the main valve allowing the flow. The downstream pressure is then transmitted through the balance pipe, acting on the underside of the diaphragm.

Any downstream pressure increase deflects the diaphragm and the pilot valve closes, thus shutting off regulated gas to the piston which in turn closes the main valve assisted by the upstream pressure and loading spring. When the correct downstream pressure is achieved, the valve opens again, repeating the already described operation.

Fig.5

PRV47 valve with compressed air top for remote control (Fig.5)

The regulating spring force is placed by a compressed air signal.

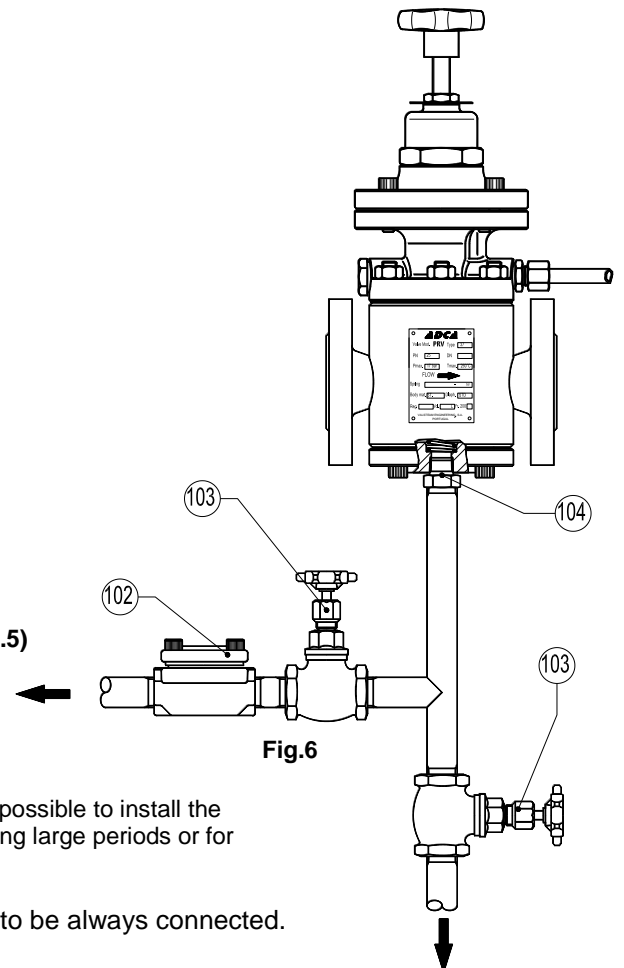

Fig.6

PRV47 with drain connection (Fig.6)

The optional drain connection is specially recommended when it is not possible to install the humidity separator close to the valve, when the valve is on no-flow during large periods or for system cleaning during start up .

Important: the balance pipe nr.26 (supplied with the valve) has to be always connected.

PRV47E with solenoid valve for electric remote control (Fig.7)

This valve version operates like the standard valve but it allows a remote control closure by means of a switching or timer control. When closing the solenoid valve, the pressure signal to the pilot valve is interrupted and thus also the main valve remains closed.

Fig.7
PRS47 pressure reducing and sustaining valve (Fig.8)

This version is a combination of pressure reducing valve and pressure sustaining valve. Compressing the spring of the PS15 (nr.106) pressure sustaining valve the same is closed till a desired set pressure, interrupting the signal to the PRV47 pilot valve and consequently it will remain closed.

Since the pressure supply to the PS15 valve reaches the desired set pressure it will allow the flow and fluid signal to the PRV47 pilot valve, it will then work as already described.

PS47 pressure sustaining valve (available on request)

The pressure sustaining valves are particularly recommended in those systems where a limited flow rate is available and it is necessary to guarantee the supply to some critical process applications. Installing this valve in the supply of non-critical application limited to the minimum required pressure, they will close in case of excess of consumption and consequent pressure drop in the system, keeping the remaining flow available for the critical application.

In general this valve maintains the upstream pressure under control.

Blue spring 1,5 to 5,5 bar - single diaphragm										2
Red spring 3,5 to 8,5 bar - double diaphragm										3
Black spring 7 to 17 bar - double diaphragm										4
Pneumatic control top 0,35 to 4 bar - single diaphragm										6
Pneumatic control top 2 to 17 bar - double diaphragm										7
Piston Rings										
Bronze c)		(1)								
FKM c)		V								
EPDM c)		E								
NBR c)		N								
Drain Connection										
Standard valve		(1)								
Drain connection DN 3/8"		D								
Valve Plug										
Standard metal to metal with hardened plug										1.
Stellited valve and plug										2.
Soft plug - Virgin PTFE										3.
Soft plug - PTFE/GR										4.
Soft plug - Rulon										5.
Soft plug - Viton										6.
Connections										
Threaded BSP ISO 7/1 Rp										A
Threaded NPT ANSI B1.20.1										C
Flanged EN 1092-1 PN40										N
Flanged ANSI B16.5 150#										U
Flanged ANSI B16.5 300#										V
SIZE										
DN 1/2" or DN15										15
DN 3/4" or DN20										20
DN										
Special valves / Extras b)										E

Remarks:

(1) Omitted if a standard valve is requested

a)PS15 Sustaining valve standard spring : 0,2 to 10 bar

b)Full description or additional codes has to be hadded in case of a a non-standard combination .

c)Valve limited to maximum operating temperature materials
